Jakub Podgorný

Czech-Italian Collaboration in Space-Based High-Energy Astronomy

2 conferences 4 years apart

International collaboration in space projects

Research in high-energy astrophysics is a shared interest among all nations and cultures.

International collaboration is a must for excellency and sharing knowledge.

Joining space projects, like IXPE, and being part of international modelling and data analysis groups was essential for my early career.

Czech-Italian team work

Italy is the heart of high-energy physics. Czech research can provide unique expertise.

34% of my scientific collaborators have Italian affiliation (Roma Tre Uni, INAF, INFN, Uni of Padova...).

Working with Italian colleagues was the right ticket for gaining specialized knowledge and soft skills at the highest proficiency.
