

Fungi II - parasitic

A diagram of a plant cell. The cell is elongated and has a thick, green, textured outer layer representing the cell wall. Inside the cell, there is a large, clear, rectangular area representing the central vacuole. The cytoplasm is shown as a light blue, granular substance. The cell membrane is depicted as a thin, light blue line. Two red arrows point to the cell wall and the cell membrane.

A longitudinal section of a plant stem showing vascular bundles. The bundles are arranged in a ring. A red arrow points to a bundle sheath cell, and a grey arrow points to a bundle sheath extension.
